iatricSystems™

Interface Engine Services

In today's healthcare environment, an interface engine is an important tool for managing increasing interoperability demands. However, to achieve the benefits of an interface engine, hospitals must have the appropriate resources available to effectively implement and manage this tool.

Our iatricSystems Integration team of professionals can help you complete and manage your interface projects quickly and cost-effectively. Our team can augment your IT staff whenever needed to complete any sized interface project, or be a comprehensive interface resource that builds and manages all your interfaces.

We provide the interface support services that fit your IT budget and specific needs regardless of your hospital's EHR or the interface engine being used.

iatricSystems Integration team provides any level of interface support you need.

Since 1990, iatricSystems has been helping hospitals achieve their integration goals regardless of the technology involved. We have deployed more than 20,000 interfaces with more than 1,000 hospitals and 700 distinct vendors.

Whether you need fully outsourced management of your engine, or staff augmentation, you are assured the iatricSystems Integration team can provide any level of support you need.

Lighten your IT workload

The iatricSystems Interface team has a full understanding of hospital business processes and healthcare vendor systems.

You can rely on us to help you with any or all aspect of interface development and implementation. We have hands-on experience with these and other interface engines:

- Bridges Interface Toolkit
- Cerner OPENLink™
- Cloverleaf Integration Engine
- Corepoint Integration Engine
- Ensemble®
- Mirth Connect
- Rhapsody Integration Engine

Key Advantages Include:

- Rely on the ability of our interface engineers to handle complex integration of systems from multiple healthcare vendors
- Receive full, ongoing interface support that can be transitioned to your in-house team if and when you desire
- Enjoy a fully collaborative partnership
- Be confident that we can handle interface work regardless of the engine being used
- Rely on our iatricSystems Integration team to help you meet evolving Meaningful Use Objectives
- Turn to us to fill in for your understaffed IT department as needed
- Receive interface support that is reliable, fast, flexible, cost-effective, and available 24/7/365 through our staffed support center
