INSTRUCTIONAL DESIGN

To be effective, your healthcare technology curriculum must be specifically designed to accommodate the needs and learning styles of busy clinicians and providers.

Sedona's education experts take a learner-focused approach to make content meaningful to your team. To do that, our instructional designers emphasize real-world workplace scenarios. We consider your team's culture, schedules, and overall knowledge and comfort levels with technology, and we can tailor your content and training delivery.

With a learner-focused approach, we will:

- Begin by understanding performance goals and training requirements
- Analyze audience needs, constraints, and challenges
- Develop role-specific and scenario-driven solutions
- Maximize retention with research-based methods
- Create targeted learning, performance-based assessments, and adoption tools
- Ensure consistency of information across roles and delivery modalities

From EHR and CPOE to decision-support tools and administrative systems, the Sedona approach contextualizes training content so that your staff feels confident incorporating these technologies into their daily practice.
