iatricSystems™

CareContinuity™

CareContinuity™ is a solution designed to provide your staff with access to critical patient information during planned and unplanned EHR or LAN downtime.

CareContinuity

Access patient data during downtime

Downtime happens. During those times, how do clinicians locate the patient information they need to provide quality care? iatricSystems is pleased to offer **CareContinuity**, a solution designed to provide your users with access to critical patient information during planned and unplanned EHR or LAN downtime from any web-enabled device.

The Offline Downtime Desktop Client allows protection to your organization in planned or unplanned LAN outages. Patient medical summary (CCDA, CCD) is exported by location to an encrypted pdf to allow for viewing of critical patient information. This ensures that you will be able to continue providing quality care, even during a LAN outage.

CareContinuity provides clinicians with a wide variety of patient data during downtime:

- H&Ps
- Lab results
- Radiology reports
- Visit history
- Orders (current and future)
- Medications (active profile and administration history)
- Vital signs
- I&Os
- Allergies
- Isolation status
- Nursing assessments and nursing notes
- Ancillary department reports (cardiology, physical therapy, dietary, etc.)

Key Advantages Include:

- Access to critical patient information during planned and unplanned EHR or LAN downtime
- Online rounds lists
- Printable MARs
- Customizable views
- Cloud Hosting is available

CareContinuity is part of the IatriConnect Solutions suite of applications. For a demonstration or more information on CareContinuity, or any other iatricSystems products or services, please contact us using the information below.
