

## UserSync™

### Why UserSync™?

As your healthcare organization grows, so does the quiet strain on your IT and administrative teams. Each new hire or departure sets off the familiar routine of manually updating profiles in both your Active Directory and MEDITECH Expanse environment, double-checking for consistency, and hoping nothing is missed. Over time, these repetitive tasks add up, consuming valuable hours and introducing opportunities for error. UserSync changes that story by seamlessly connecting your hospital's Active Directory with your MEDITECH Expanse User and Person Dictionaries. With UserSync, your team can trust that user data stays aligned, secure, and up to date.

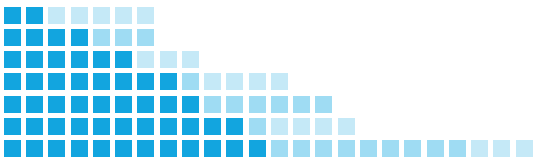

As the number of IT projects competing for resources grows, it's more important than ever to eliminate tedious, time-consuming tasks. Allow UserSync to eliminate the need for double data entry by connecting your Active Directory to your MEDITECH User Dictionary today.

### Help Streamline Onboarding

UserSync uses the new individual's Active Directory account to automatically set them up in MEDITECH User Dictionaries, improving security, integrity, and consistency for your hospital's users.

#### Key Advantages Include:

- Disables EHR users automatically once users are disabled in the Active Directory
- References Active Directory user information to update the MEDITECH User Dictionaries
- Eliminates the additional steps of communication between departments
- Achieves cost reduction by eliminating unnecessary communication and reducing the chances of mistakes

## Improve Resource Allocation and Enhance Database Security

Network administrators, such as your IT analysts, no longer have to worry about the mundane tasks associated with onboarding new hires or deleting previous employees out of the necessary systems. Allow your teams to focus on higher-priority tasks while also improving the security, integrity, and consistency of your EHR databases.

### Streamline User Creation

As new hires are onboarded and added to the Active Directory, their information is automatically added to MEDITECH as well. Not only does this save IT teams time by eliminating the need for double data entry, but also helps ensure accuracy by reducing the amount of manual input into different systems. UserSync reduces the repetitive manual tasks associated with the onboarding process.

### Aggregate User Data

UserSync allows for a one-stop-shop while editing users. Before, multiple teams had to go into both the Active Directory and MEDITECH to update a user. Now, when a change is made in the Active Directory, it reflects in your MEDITECH User Dictionary as well, giving teams more time to focus on what's important. This helps eliminate mistakes, such as misspellings, and ensures consistency across systems.

### Easily Disable Users

When users are disabled in the network database, they are automatically inactivated in your MEDITECH environment as well. This helps ensure that individuals no longer working for your organization don't fall through the cracks and retain access far longer than they're supposed to. Not only does this help boost security at your healthcare organization, but helps reduce manual, tedious work as well.

### Save Meaningful Time

IT teams should be focusing their efforts on high-priority and high-effort projects. When their days and workflows get bogged down due to repetitive manual tasks, it creates a barrier between what they should be focused on, and what pulls them aside. By limiting unnecessary communication and syncing systems, you ensure their effort is focused in the right areas.

For more information about UserSync or any other iatricSystems products or services, or to request a demonstration, please contact us using the information below.

Additional types of costs may include server and storage hardware, Microsoft licensing (OS, database, etc.), 3rd party licensing (digital certificates, backups, etc.), and 3rd party interface/ integration. Please consult with iatricSystems for the specific server hardware and software requirements for this product.
